                                                                                                                                                                                                                                                                                                                                         Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This sequence is the La autoantigen binding domain (LAP). LAP is a CC cellular protein which binds to an internal ribosome entry site (IRES). CC The peptide is used to inhibit mRNA translation, viral protein CC translation or viral replication. Viral mRNA translation is initiated at the IRES and the LAP peptide prevents translation initiation factors from thinding at the site. The peptide can be used alone or in combination with CC an inhibitor RNA (IRNA see ARA5200). The LAP peptide is useful as an CC antiviral agent, which works through the inhibition of mRNA translation, cespecially viral mRNA. Examples of viruses which can be inhibited are CC picornavirus, flavivirus, coronavirus, hepatitis A B or C viruses, rhabdovirus, adenovirus, and parainfluenza virus, poliovirus, rhinovirus, corosackie virus, encephalomyocarditis virus, foot-and-mouth disease CC virus, echo virus, hepatitis C virus, infectious bronchitis virus, duck and human hepatitis B virus, and vesticular stomatitis virus. The peptide calso inhibits replication of the above viruses. The LAP peptide not cover the cover of the cove

New compound containing acidic and aromatic amino acids, useful as antiviral therapy in pharmaceutical, veterinary or agricultural/horticultural applications.

Claim 1; Page 15; 19pp; English.

The present invention relates to peptides and methods of inhibiting the replication of viruses that utilise internal ribosome entry site (IRES) inlitiated translation, and/or inhibiting viruses that utilise the La antigen protein (LAP) in any phase of their life cycle. The peptides of the invention compete with LAP and inhibit the utilisation of various blochemical and physiological functions of LAP required for a productive life cycle. The methods and compositions are useful as antiviral therapy in pharmaceutical, veterinary or agricultural/horticultural applications. ABG72101-ABG72119 represent peptides useful as antiviral agents

                                                                                                                                                                                                                                                                                                                                                  Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   CC associated with breast and ovarian cancer. Included in the invention are CC sequences AAP22032 - AAP22040 and AAB59129 which are used in the CC isolation and characterisation of the DNA and protein sequences of the CC invention. The breast and ovarian cancer associated DNA, protein, agonist or antagonist sequences exhibit cytostatic; immunosuppressive; nootropic; neuroprotective; antivilcer; vulnerary; anticonvulsant; antidiabetic; antiinflammatory; antivilcer; vulnerary; anticonvulsant; antibacterial; antiinflammatory; antivilcer; vulnerary; anticonvulsant; antibacterial; cc antifungal; antiparasitic and cardiant activity. The polynucleotide and C protein sequences are used in the diagnosis of cancer, particularly cc breast and ovarian cancer. The nucleic acid sequences, proteins, agonists cand agonists may also be used in the diagnosis, prevention and treatment confimmune disorders e.g. Addison's disease, autoimmune consecutar disorders such as myocardial ischeems mellitus, Crohr's cardiovascular disorders such as myocardial ischaemias; wound healing; conversioned and disorders such as myocardial ischaemias; wound healing;

CC recombinant vectors and host cells comprising human ovarian antigen of ovarian antigen polymucleotides, antibodies against human ovarian antigens, and the use of ovarian antigen polymucleotides and polypeptides in diagnosing, conference of ovarian antigens of preventing various ovary and/or breast related disorders. Such conditions include ovarian concer and breast cancer, and conference of disorders. Such conditions include ovarian cancer and breast cancer, and concern disorders, infections (e.g., infertility, disorders of pregnancy, anovulation, conjugated by syndrome, ovarian cysts, and dysmenorrhoea), endocrine disorders, infections (e.g., chlamydia, HIV, toxoplasmosis, and toxic shock syndrome), inflammatory conditions (e.g., mastitis, oophoritis and communodeficiencies, autoimmune oophoritis, systemic lupus erythematosus), inflammatory conditions (e.g., mastitis, oophoritis and communodeficiencies, autoimmune oophoritis, systemic lupus erythematosus), conspiratory disorders, neurological disorders, gastrointestinal disorders, candurates ovarian antigen polypeptides and conjugated disorders. Ovarian antigen polypeptides and conjugated by used in screening for compounds which conjugated by used in screening for compounds which conjugated by used as food additives or to prepare antibodies and the sequence represents a human ovarian antigen of the invention. Note: The sequence data for this patent did not form part of the printed cate for wino infrant/published not sequence format directly from WIPO at the properties.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to 2175 novel numan ovarian analysis (REP43228) and to cDNAs encoding them (ABQ5431-ABQ56305), and also ancompasses polypeptides 90% identical and polynocleotides 95% identical encompasses polypeptides 90% identical monoton additionally relates to to the sequences of the invention. The invention additionally relates to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      cardiovascular disorder; respiratory disorder; neurological disorder; gastrointestinal disorder; urinary system disorder; drug screening; gene therapy; chromosome mapping; forensic analysis; antibody preparation; cyrostatic; immunomodulatory; neuroprotective;

Ct that is differentially expressed in neuronal tissue of a first animal CC subjected to pain, a method for identifying a compound which regulates CC the expression of a polymucleotide sequence which is differentially CC expressed in an animal subjected to pain, a method for identifying a CC compound that regulates the activity of one or more of the polymucleotides, a method for producing a pharmaceutical composition, a CC polymucleotides, a method for producing a pharmaceutical composition, a CC polymucleotides, a method for producing a pharmaceutical composition, a cctivity in an animal of one or more of the polypeptides given in the CC specification, a method for identifying a compound useful in treating CC pain and a pharmaceutical composition comprising the one or more CC polypeptides or their antibodies. The polymucleotide or the compound that CC modulates its activity is useful for preparing a medicament for treating CC pain (e.g. spinal segmental nerve injury (CNINg), chronic constriction CC injury (CCI) and spared nerve injury (SNI)) in an animal (e.g. gene CC the specification) which is differentially expressed during pain. Note: CC the specification, but was obtained in electronic form directly from WIPO at CC francia introducional contraction of the printed CC specification, but was obtained in electronic form directly from WIPO at CC francia contraction will call and contraction will call and contraction will call and contraction of the printed contraction will call and call call and cal

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 consequences. (I) is useful as hybridisation probes, polymerase chain of reaction (PCR) primers, oligomers, and for chromosome and gene mapping, condition and in recombinant production of (II). The polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed contivity of (II) or to treat disease states involving (II). (II) is considered in tissue, as molecular weight markers and as a food conjugated in tissue, as molecular weight markers and as a food conjugated in tissue, as molecular weight markers and as a food conjugated in tissue, as molecular weight markers and as a food conjugated in tissue, as molecular weight markers and as a food conjugated in the binding partners are useful in medical imaging conjugated in the protein expression or biological activity. The conjugated in the protein expression or biological activity. The conjugated in the produce other types of data and products dependent on DNA and confusion acid sequences. Abg00010-Abg30377 represent novel human diagnostic camino acid sequences of the invention. Note: The sequence data for this camino acid sequences of the invention. Note: The sequence data for this camino acid sequences of the printed specification, but was obtained in celectronic format directly from WIPO at this conjugated in the printed specification, but was obtained in celectronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Query Match

                                                                                                                                                               that is differentially expressed in neuronal tissue of a first animal consumers of the pain, a method for identifying a compound which regulates the expression of a polynucleotide sequence which is differentially expressed in an animal subjected to pain, a method for identifying a compound that regulates the activity of one or more of the polynucleotides, a method for producing a pharmaceutical composition, a method for identifying a compound or small molecule that regulates the compound for identifying a compound or small molecule that regulates the activity in an animal of one or more of the polypeptides given in the specification, a method for identifying a compound useful in treating pain and a pharmaceutical composition comprising the one or more composition to the polypeptides or their antibodies. The polynucleotide or the compound that modulates its activity is useful for preparing a medicament for treating composition composition composition (e.g. spinal segmental nerve injury (Chung), chronic constriction composition (e.g. spinal segmental nerve injury (SNI)) in an animal (e.g. gene the specification) which is differentially expressed during pain. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic form directly from WIPO at the property of the specification of the patent of the printed specification is proventially expressed during pain.

Claim 1; Page; 1017pp; English

invention discloses a composition comprising two or more isolated

iragment,

New composition comprising two or more isolated polypeptides, useful for preparing a medicament for treating pain in an animal.

GENBANK; P05455

Claim 1; Page; 1017pp; English.

```
or human polynucleotides or a polynucleotide which represents a fragmer derivative or allelic variation of the nucleic acid sequence. Also claimed are a vector comprising the novel polynucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a
```

cc kit to perform the method, an array, a method for identifying an agent ct that increases or decreases the expression of the polynucleotide sequence that is differentially expressed in neuronal tissue of a first animal csubjected to pain, a method for identifying an agent csubjected to pain, a method for identifying a compound which regulates ct the expressed in an animal subjected to pain, a method for identifying a compound which regulates compound that regulates the activity of one or more of the polynucleotides, a method for producing a pharmaceutical composition, a compound that regulates the activity of one or more of the polynucleotides, a method for identifying a compound that regulates the cc method for identifying a compound useful in treating specification, a method for identifying a compound useful in treating compound and a pharmaceutical composition comprising the one or more compound that regulates its activity is useful for preparing a medicament for treating compain (e.g. spinal segmental nerve injury (Chung), chronic constriction conjury (CCI) and spared nerve injury (CNINg), chronic constriction confictation) which is differentially expressed during pain. Note: The specification, but was obtained in electronic form directly from WIPO at the printed but was obtained in electronic form directly from WIPO at the printed of the prin ftp.wipo.int/pub/published_pct_sequences.

Colaimed are a vector, a method for identifying a nucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence comprising the vector, a method for identifying a nucleotide sequence contains a differentially regulated in an animal subjected to pain and a contain that increases or decreases the expression of the polynucleotide sequence that is differentially expressed in neuronal tissue of a first animal compound that regulates the expression of a polynucleotide sequence which is differentially compound that regulates the activity of one or more of the compound that regulates the activity of one or more of the compound that regulates the activity of one or more of the continucleotide, a method for producing a pharmaceutical composition, a compound for identifying a compound or small molecule that regulates the continuity in an animal of one or more of the polynucleotide or their animal of one or more of the colypeptides or their antibodies. The polynucleotide given in the colypeptides or their antibodies. The polynucleotide or the compound that new continuity (cnums), chronic constriction constriction (e.g. spinal segmental nerve injury (cnums) a medicament for treating continuity (constriction) which is differentially expressed during pain. Note: the sequence data for this patent did not form part of the printed at for its patent did not form part of the printed at for its patent did not form directly from WIPO at the confidential or the part of the printed at the confidential or the part of the printed at the confidential or the part of the printed at the confidential or the part of the printed at the confidential or the part of the printed at the confidential or the part of the printed at the confidential or the part of the printed at the confidential or the part of the printed at the confidential or

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  condition. The method comprises comparing the transcriptome proteome of a condition. The method comprises comparing the transcriptome of a condition with that of a second specialised cell type implicated in a disease or condition with that of a cell type, under two experimental conditions, and conditions, and conditions are useful for the two specialised cell types under experimental conditions. ABV7873-ABV78116 and ABP65061-ABP65257 were identified using the methods of the invention. The coding sequences and proteins are useful for treating a disease in a patient, for manufacture of a medicament for treating hypoxia-regulated conditions, and for regulating tumourigenesss, angiogeness, apoptosis, biological response to hypoxia conditions, or hypoxic-associated pathology in a patient. The coding sequences and proteins are also useful for monitoring the therapeutic treatment of a disease or physiological condition, such as cancer, ischaemic conditions, reperfusion injury, retinopathy, neonatal stress, preeclapmsia, atherosclerosis, inflammatory conditions, wound healing, inflammation, erythropoiesis or hair loss
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              CC that increases or decreases the expression of the polymucleotide sequence considered to pain, a method for identifying a compound which regulates compound that regulates compound that regulates the expression of a polymucleotide sequence which is differentially compound that regulates the activity of one or more of the compound that regulates the activity of one or more of the compound that regulates the activity of one or more of the compound for identifying a compound or small molecule that regulates the activity of one or more of the cartivity in an animal of one or more of the polymucleotides, a method for identifying a compound or small molecule that regulates the activity in an animal of one or more of the polympeptides given in the capture of the polympeptides of the capture of the polympeptides of the compound that regulates the compound or more of the polympeptides or their antibodies. The polymucleotide or the compound that condulates its activity is useful for preparing a medicament for treating compain (e.g. spinal segmental nerve injury (Chung), chronic constriction compain (e.g. gene context). The sequence presented is a human protein (shown in Table 2 of the specification, which is differentially expressed during pain. Note: The sequence data for this patent did not form part of the printed conscription in the polymperise description which is different of the printed conscription that the polymperise description which is different to the pr
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match

5' ESTs derived from mRNAs encoding secreted proteins. The 5' ESTs were prepared from total human RNAs or polya+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTs are derived from mRNAs and even in those cases where therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain upstream regulatory sequences and to design expression and secretion vectors
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           present sequence is a polypeptide encoded by one of a large number of ESTs derived from mRNAs encoding secreted proteins. The 5' ESTs were

The La protein is clinically related to the Ro protein that is highly common among autoimmune patients. La and Ro antigens sometimes reside on the same cellular ribonucleoprotein particle; most La patients contain some Ro antibodies and vice versa. La CDNA has been isolated from a human liver
                            Identifying a gene involved in disease for treating hypoxia-regulated conditions, comprises comparing the transcriptome/proteome of two celtypes under different conditions and identifying a differentially

                                                                                                                                                                                                                      The present invention relates to peptides and methods of inhibiting the replication of viruses that utilise internal ribosome entry site (IRES) initiated translation, and/or inhibiting viruses that utilise the La antigen protein (LAP) in any phase of their life cycle. The peptides of the invention compete with LAP and inhibit the utilisation of various blochemical and physiological functions of LAP required for a productive life cycle. The methods and compositions are useful as antiviral therapy in pharmaceutical, veterinary or agricultural/horticultural applications. ABG72101-ABG72119 represent peptides useful as antiviral agents
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    rhabdovirus, adenovirus, and parainfluenza virus, poliovirus, rhinovicoxsackie virus, encephalomyocarditis virus, foot-and-mouth disease virus, echo virus, hepatitis C virus, infectious bronchitis virus, di and human hepatitis B virus, and vesicular stomatitis virus. The pept also inhibits replication of the above viruses. The LAP peptide selectively inhibits viral protein translation, and is therefore not toxic to the host cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New compound containing acidic and aromatic amino acids, useful antiviral therapy in pharmaceutical, veterinary or agricultural/horticultural applications.
                                                                                                                                                                       Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to peptides and methods of inhibiting the replication of viruses that utilise internal ribosome entry site (IRES) initiated translation, and/or inhibiting viruses that utilise the La antigen protein (LAP) in any phase of their life cycle. The peptides of the invention compete with LAP and inhibit the utilisation of various biochemical and physiological functions of LAP required for a productive life cycle. The methods and compositions are useful as antiviral therapy in pharmaceutical, veterinary or agricultural/horticultural applications. ABG72101-ABG72119 represent peptides useful as antiviral agents
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         internal ribosome viral life cycle;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ---

New yeast inhibitory peptide useful for inhibiting viral protein translation and replication.

Claim 5; Page 57; 81pp; English.

This sequence is the La autoantigen binding domain (LAP). LAP is a cellular protein which binds to an internal ribosome entry site (IRES). The peptide is used to inhibit mRNA translation, viral protein translation or viral replication. Viral mRNA translation is initiated at the IRES and the LAP peptide prevents translation initiation factors from binding at the site. The peptide can be used alone or in combination with an inhibitor RNA (IRNA see AAZ45200). The LAP peptide is useful as an antiviral agent, which works through the inhibition of mRNA translation, especially viral mRNA. Examples of viruses which can be inhibited are picornavirus, flavivirus, coronavirus, hepatitis A B or C viruses,
